ISS: a Russian cosmonaut and an American astronaut take their first steps in space

MOSCOW (AFP) – On Tuesday a Russian cosmonaut and an American astronaut from the crew of the International Space Station (ISS) made their first sortie into space in order to install an instrument on the ISS designed to measure the electromagnetic fields around it, according to the Russian press agency Ria-Novosti.

It's the first sortie for Yuri Lontchakov and Michael Fincke, who arrived at the ISS in October on board a Russian Soyuz rocket.

During this sortie, planned to last 6 hours and 10 minutes, the cosmonauts had to attach a special instrument to the stowage hatch of the ISS in order to measure the ElectroMagnetic Fields around it.

According to the experts, the influence of these fields could be one reason for the bumpy landings when the two previous crews came back to Earth on the Soyuz, in April 2008 and in October 2007, the agency declared.

(Editor's note from Next-up Organisation: to put it more clearly, "the onboard calculators of the ISS malfunctioned because of the radiation from the electromagnetic fields.")

TGI de NANTERRE
JUGEMENT

Nanterre Tribunal de Grande Instance (High Court): Citizens living near phone masts vs. Bouygues Telecom.

Extract from the Judgement given on 18 September 2008 [[Judgement PDF page 4](#)]:

"Reason for the decision: the health risk.

"To expose one's neighbour against his will to a certain risk, and not a hypothetical one as the defence has claimed, constitutes in itself a public nuisance. Its egregious character is due to the fact that it has a bearing on human health.

"If this risk were to materialise in significant health problems, this would constitute a different type of offence deserving a more severe sentence, in accordance with the gravity of the problems."

Taking effective action
is making mobile phones compatible with human health,
it's [helping Next-up Organisation](#) in its fight,
especially to bring cases to court,
it's getting the BioInitiative standard adopted.
