

The city of Xirivella maintains the moratorium on the installation of phone masts.

F. D. C. XIRIVELLA

The municipality of Xirivella (Spain) has obtained a favorable judgement against France Telecom concerning the grant of licenses of mobile telephony.

In March 2007 the Town hall approved a deliberation aimed at suspending for a period of one year any authorization for the installation or activation of phone masts base stations.

France Telecom had call an appeal to the courts by requesting the preventive suspension of this moratorium.

Joan Antoni Pérez, counsel, municipal council in charge of Urbanism and Town planning, said this is “good news for Xirivella and the health of the residents. Moreover, it gives us reason in our fight to prevent the installation of phone masts in residential areas.

Indeed our objective is to get rid of all phone masts, whether legal or not, in urban areas. “

The Town hall is studying the approval of a deliberation from February of a deliberation for a decree concerning electromagnetic pollution which will prohibit the installation of phone masts at less than 300 meters of any urban zone.

The project was presented to several resident associations.

Note: Next-up organization is pleased to see the determination of our Spanish friends to completely eradicate electromagnetic pollution (electrosmog) from phone masts and Hertzian Repeaters in urban areas. Just like passive nicotinism, users of mobile phones do not have to let others bear a strong perennial irradiation in urban areas.

Everyone should take his responsibilities in particular by using individual protection means (e.g. earphone kit) and avoid phoning with a mobile near a person in order not to irradiate other people. (File [INRS the reality of figures](#)). (Pictogram [Passive Nicotinism = Passive Irradiation](#)).

(*English version in progress*)

Massive information of the population about the medical realities of mobile telephony irradiations, as wished by Dr. Roger Santini, founder president of Next-up organization, is starting to bear fruits.

Please ensure this information is widely spread around you, as an example, in particular to municipality Town councils.
