## The effects of mobile phones to the program of Grenelle?

NOUVELOBS.COM | 20.09.2007

**It is what demands the president of the European Institute of the ecology, which welds the "harmfulness" of the radiations of mobile phones.**

**T**he radiation of mobile phones should be put in the program of "Grenelle of the environment", esteems the president of the European Institute of ecology (IEE), in an interview published on Thursday by the everyday Idaily paper *Le Republicain Lorrain*.  
(Ndlr Next-up : « [Peser sur le Grenelle](#) »).

"The Center of independent research and information about the electromagnetic radiations (Criirem), which takes charge of sanitary problems connected to the electromagnetic fields generated by the equipments of mobile telephony, is very worried", underlines Jean-Marie Pelt.

"It is absolutely necessary to forbid the mobile phone to the children", estimates (esteems) Jean-Marie Pelt, who participates in the preliminary documents of "Grenelle" that must be held in the end of October

### Harmful in the High-Speed Train (HST)

"Come out that he(it) is harmful to use his(its) mobile phone in the HST because, in high speed, we pass from a relay to the other one with rough ascents of the signal", explains the president of the IEE, association deprived of right (straight) premises which he created in Metz (France) in 1971.

The French Agency of sanitary safety (security) and the environment in the work (Afsset) has just been invited by the Ministries of Health and the Ecology to make a new synthesis of the knowledge on the radio frequencies, in particular the Wi-Fi.

Afsset has already made the recommendations "so that there are the weakest possible exhibitions (exposures)" in the radiations of mobiles.

"The quantum medicine is interested in these questions", pursues Jean-Marie Pelt. "We are going to open to the IEE an international center of quantum biophysics applied to the environment and to the health", he announces.
