Information about the SAR

Your mobile phone is an apparatus intended to emit and receive RadioFrequency signals. It has been designed and manufactured so as not to exceed the limits of exposure to radiofrequencies established by the Council of the European Union. These limits are part of a range of detailed directives and define the level of exposure to radiofrequencies permitted for the general public. These directives are based on safety standards drawn up by independent scientific organisations from a regular and careful assessment of scientific studies. These standards include a significant safety margin intended to assure safety for the user, whatever their age or state of health.

The statutory limit of exposure to the radio waves emitted by mobile phones is measured in units called the Specific Absorption Rate (SAR). The SAR limit set by the Council of the European Union is 2.0 W/kg. The highest SAR rate observed for this model is 0.932 W/kg.

Declaration of Conformity (R&TTE)

We, Samsung Electronics
declare on our own responsibility that the product:

Mobile telephone GSM: SGH-C450

to which this declaration refers, conforms to the statutory limits and/or the following regulatory directives:

<table>

This telephone has been tested and has proved to conform to the statutory limits for the emission of radiofrequencies. In addition we declare that this apparatus satisfies all the essential conditions of the directive 1999/5/EC.

The procedure of evaluation of this conformity, as defined in article 10 then detailed in annexe [IV] of the directive 1999/5/EC, was carried out under the control of the following organisation:

BABT, Balfour House, Churchfield Road,
Walton-on-Thames, Surrey, KT12 2TD, UK*
Identification number: 0168

Technical documentation held by:
Samsung Electronics QA Lab.
available on demand.
